EDUCATION

Vellore Institute of Technology Bhopal (VITB) Oct 2022 - 2026
Bachelors of Technology in Sepc. Cloud Computing & Automation GPA: 6.84/10.0

PERSONAL SUMMARY

I am a Computer Science undergraduate (2026) with practical experience in embedded systems programming, hardware-software integration, and realtime system design disciplines that transfer directly to cloud infrastructure, IaC, and DevOps workflows. I completed certifications in Machine Learning(Coursera), Generative AI (IBM Watsonx), and Data Analytics (Deloitte). Proficient in Python, C/C++, Git, and serial communication protocols. Eager to apply systems-level thinking to cloud architecture, automation, and scalable infrastructure design.

PROJECTS

PlatePilot.AI Sep. 2024 - Nov. 2024
Group Project git.io/PlatePilot.AI

- Developed a responsive, modern front-end for a food rescue app using **React**, **Tailwind CSS**, and **Framer Motion**.
- Engineered a secure RESTful API using **Express**, with **Prisma ORM** for data persistence and **JWT** for authentication.
- Engineered an **Epsilon-Greedy multi-armed bandit (reinforcement learning)**model in Python to optimize food allocation, analyzing historical data to power a dynamic, impact-driven recommendation system for the platform.

Mintsem Jan. 2024 - Feb. 2024
Inter-hostel technical competiton, Kriti git.io/Mintsem

- Architected **ERC-721** compliant smart contracts in **Solidity** to create a tamper-proof, on-chain academic registry.
- Built a full-stack dApp with **React** and **Ethers.js**, creating a seamless workflow for issuing academic credentials as **NFTs** to **IPFS**. enabling transparent on-chain verification by third parties to eliminate document forgery and fraud.

ZCoder: Online Learning Platform Oct. 2023-Dec. 2023
Coding Club git.io/Zcoder

- Architected a collaborative platform with **Node.js, Express, and MongoDB**, featuring Google Sign-In and user profiles.
- Integrated a real-time chat and community discussion feature using **React and Socket.io** to boost peer-to-peer engagement.
- Leveraged the **Codeforces API** to power a dynamic contest calendar with automated problem and progress tracking.

Other Projects

- **PixelFits** : Developed an AI-powered fashion recommendation web application using HTML, CSS, JavaScript, Flask and DeepFashion-based model to provide personalised clothing and outfit recommendations.

ACHIEVEMENTS

- **Data Analytics - Deloitte (2026)**
- **Applied ML in Python - Coursera(2023)**
- **Generative AI Using IBM Watson - (2024)**

TECHNICAL SKILLS

Programming languages: C/C++, python*, TypeScript*
Web Technologies: HTML, CSS, React, Node.js*
ML/AI: Numpy, Pandas, Matplotlib, Scikit-learn
Databases: MongoDB, MySQL* **Operating System:** Windows, Mac
Miscellaneous: Git,Github,Matlab

RELEVANT COURSEWORK

Computer Science: Data Structures and Algorithms,Introduction to computing, **Data Science:** Applications of Artificial Intelligence and Machine, Spec. Cloud computing &automation

POSITIONS OF RESPONSIBILITY

Core Team Member, Cisco Photography Club: Mar '24
Contributed to shoot clips of the events and edit the videos.

INTERNSHIPS

- **Bacancy Technologies — Trainee Software Engineer | Jul 2026 - Oct 2026**
  - Worked on **ESP32-C6 embedded development using ESP-IDF**, developing and validating firmware for microcontroller peripherals including I2C, UART, SPI, PWM, and interrupts. Integrated and tested LCD and RFID modules and worked on **ROPE charger systems**, gaining hands-on experience in charger architecture, communication interfaces, hardware integration, and debugging.
